EFFICIENCY STANDARD

Summary (for guidance only, not binding) of the regulations in force from 1 January 2017 in accordance with Regulation (EC) n° 640/2009 of the Commission, 22 July 2009 (and subsequent amendments). Green design requirements for electric motors. The selection of the efficiency level, IE3, IE2 or IE1, is always the customer's responsibility. (*)

SCOPE OF APPLICATION (*)

Minimum efficiency level IE3

IE3

- Continuous duty operation S1 and intermittent duty S3 of 80% or greater.
- Three-phase squirrel-cage induction motors, rated voltage up to 1000 V.
- Single-speed, 2, 4 and 6 poles.
- Frequency 50Hz or 50Hz/60Hz.
- Rated output from 0.75kW to 375 kW.
- Motors operating within the EU, Norway and Switzerland.

IE2

- S9 duty – When IE3 efficiency is required but motor is operated with a frequency converter, an IE2 motor can be installed.

EXCEPTIONS / MOTORS EXCLUDED FROM THE SCOPE OF APPLICATION (*)

It is important to know both the standard and its exceptions, as well as the applications outside the scope and the control of regulations.

Technical factors	Application factors	Geographical factors
<ul style="list-style-type: none">• 8 poles motors (750 rpm).• Multi-speed motors.• Rated output up to 0.55kW.• ATEX motors (potentially explosive atmospheres).• Brake motors.	<ul style="list-style-type: none">• S3, S4, S5, S6... duties up to 75% SD.• Motors designed to operate wholly immersed in a liquid.• Motors completely integrated into a machine that cannot be tested separately.	<ul style="list-style-type: none">• Motors operating out of the EU.• Altitude exceeding 4000 m above sea-level.• Ambient temperature exceeding 60°C and less than -30°C.

(*) Summary not binding for guidance only. Please refer to the original standard.

MECHANICAL TOLERANCES

Symbol	Description	Tolerance
A	Distance between centre-lines of fixing holes (end view).	± 1 mm
AB, AC	Maximum motor width (terminal box excluded).	+ 2 %
B	Distance between centre-lines of the fixing holes (side view).	± 1 mm
C	Distance from the shoulder on the shaft to the centre-line of the mounting holes in the nearest feet.	± 3 mm
D	Outside diameter of the shaft.	k6 up to 48 mm m6 from 55 mm
E	Shaft diameter < 55 mm. Shaft diameter > 60 mm.	- 0.3 mm + 0.5 mm
F	Width of the key.	h9
GA	Distance from the top of the key to the opposite surface of shaft.	+ 0.2 mm
H	Distance from the centre-line of the shaft to the bottom of the feet.	- 0.5 ≤ 250 mm - 1 ≥ 280 mm
HD	Overall height (from the lowest to highest part).	+ 2 %
K, S	Diameter of fixing holes, feet or flange.	+ 3 %
L	Overall length.	+ 1 %
M	Distance between flange mounting holes.	± 0.8 mm
N	Diameter of the spigot.	j6 up to 230 mm h6 from 250 mm
P	Outside diameter of the flange.	-1 mm
	Distance from the mounting surface of the flange to the shoulder on the shaft, with blocked bearing.	± 0.5 mm
	Distance from the mounting surface of the flange to the shoulder on the shaft.	± 3 mm
m	Motor weight.	From - 5 to + 10 %

ELECTRICAL TOLERANCES

Electrical parameters according to the EN 60034-1 standard:

Efficiency (η) (Indirect measurement)	- 0.15 (1- η) for $P_N \leq 150$ kW - 0.1 (1- η) for $P_N > 150$ kW
Power factor ($\cos \phi$)	$\frac{1-\cos\phi}{6}$ minimum 0.02 maximum 0.07
Slip (rpm) (At rated temperature and load)	$\pm 20\%$ for $P_N \geq 1$ kW $\pm 30\%$ for $P_N < 1$ kW
Starting current (I_A)	+ 20% (without lower limit)
Starting torque (M_A)	-15% and +25%
Rated torque (M_k) (maximum)	10% (for this MK value / Mn must be of at least 1.6)
Minimum torque (M_s)	-15%
Moment of inertia (J)	$\pm 10\%$
Sound level (sound pressure)	+3 dB (A)

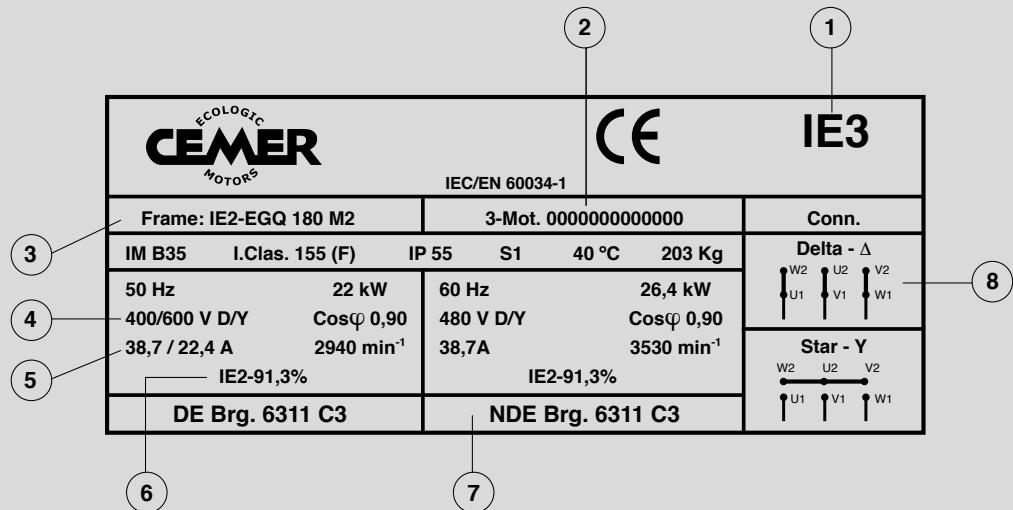

MAIN FEATURES

CEMER asynchronous three-phase and single-phase motors are designed according to IEC 60034, IEC 60038 and IEC 60072; frame sizes 56 - 355; power 0.06 kW - 315 kW suitable for continuous operation (S1) at rated voltage and frequency values; ambient temperature up to 40 °C and height above sea level ≤ 1,000 m. Single-speed of 2, 4,6 and 8 poles at 230/400 V or 400/690 V 50 Hz and 230 V 50 Hz. Insulating class F, temperature rise class B. IP 55 protection, which ensures protection against dust and low-pressure water jets from any direction.

NAMEPLATE

Each motor is identified with an indicator plate including the technical details required by the IEC 60034-30:2008 standard. The plate is aluminium or steel depending on the series and is fitted on the side or top of the motor frame.

1 Efficiency class (IE1, IE2, IE3)

2 Serial number

3 Type (IE2-EGQ 180M 2): efficiency level (IE2), series (EGQ), frame size (180M) and number of poles (2)

4 Rated voltage at 50 Hz

5 Rated current at 50 Hz

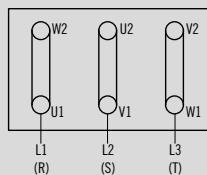

6 IE efficiency class and 100% of load rated efficiency at 50 Hz

7 Type of bearings

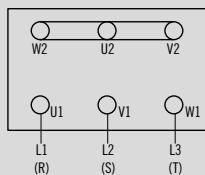

8 Connection diagram (for motors frame size ≥ 160)

CONNECTION DIAGRAM

Single-speed three-phase motor

Low voltage (Δ)

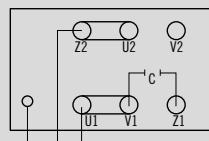

High voltage (Y)

MS / EG / MSEF series

For star-delta switch without connection bridges, connection must be done according to the supplier's diagram.

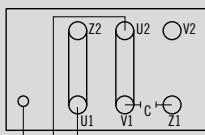

Starter ($Y - \Delta$)

Single-phase motor

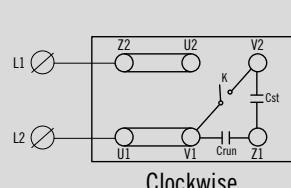

Clockwise

MYT / MY series

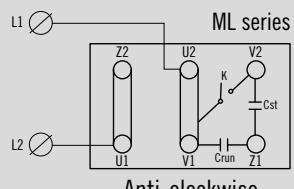

Anti-clockwise

Single-phase motor

Clockwise

Anti-clockwise

Electromagnetic brake motors (MSEF series), when powered with a frequency converter, need an independent brake connection from the motor. Please contact to Cosgra for the connection diagram.

MOUNTING POSITIONS

CEMER motors from 56 to 355 can be supplied according to the mounting positions of the following table. Basic types of mounting are designated according to EN 60034-7. Motors mounted in IM B3, IM B5 or IM B14 can also be mounted in different positions.

IM B3 in IM V5, IM V6, IM B6, IM B7, IM B8.

IM B35 in IM V15, IM V36, IM 2051, IM 2061, IM 2071.

IM B34 in IM 2111, IM 2131, IM 2151, IM 2161, IM 2171.

IM B5 in IM V1 and IM V3. (Through-holes flange).

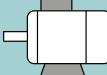

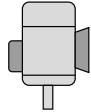

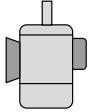

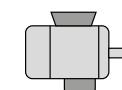

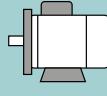

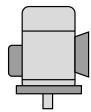

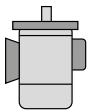

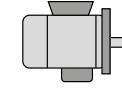

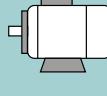

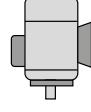

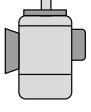

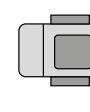

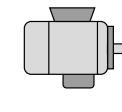

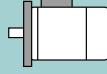

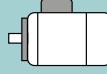

IM B14 in IM V18 and IM V19. (Threaded holes flange).

For any mounting position frame size 160-355, specially for IM V5, IM V6, IM B6, IM B7 and IM B8 types, please contact to Cosgra.

Positions IM B5 and IM V3 cannot be used for motors 315 and 355. For frame size 280 please contact to Cosgra.

160	2-4-6-8	45x65x8	45x65x8

* Shaft seal in parenthesis refers to MYT / MY / ML single-phase motors.

Note: Bearings and shaft seals dimensions change depending on the motor series. For further information please contact to Cosgra. Data for MSE series.

EG

MOTOR SERIES

BEARINGS

EG motor series are delivered with bearings suitable for direct coupling and horizontal operation.

They are deep groove ball bearings, open and have a single row. They need to be lubricated with lithium-based grease suitable for bearings. **EG** cast iron motors are designed with an external lubrication system.

Motor		Bearing		
Frame size	Poles	DE	NDE	Lubrication hours/cm ³
160	2-4-6-8	6309 C3	6309 C3	2000 - 4000 / 20-20
180	2-4-6-8	6311 C3	6311 C3	2000 - 4000 / 23-23
200	2-4-6-8	6312 C3	6312 C3	2000 - 4000 / 31-31
225	2	6312 C3	6312 C3	2000 / 31-31

315	4-6-8	95x120x12	95x120x12

Note: Bearing and shaft seals dimensions change depending on the motor series. For further information, please contact to Cosgra. Data for EGQ series.

MOTORS MODIFICATIONS

BELT/PULLEY TRANSMISSION (*)

Transmission elements need to be selected carefully in order to ensure a good performance of the motor. Please contact your supplier of belts, pulleys and couplings or our technical department.

When a motor is driven by belt/pulley, there's a high radial force on the motor's shaft, which is transmitted to the DE bearing. For motors from frame size IEC-56 to 250 (included) the magnitude of this force is not important and it can be used a standard bearing.

Motors from frame size IEC-160 to 355 need a cylindrical roller bearing (NU-type), which is selected depending on the application. Following information about pulley will be required:

-Weight (Kg)

-Outer diameter (mm)

-Number of grooves (N)

-Width (mm)

IMPORTANT. Cylindrical roller bearings (NU) must always support at least 25% of their maximum radial load in order to ensure their correct operation. In many cases, the weight of the element supported by the bearing, together with the external forces, is greater than the minimum required load.

VERTICALLY MOUNTED MOTORS – SHAFT UP (*)

Mounting positions: B3-V6, B35-V36, B34-IM 2131, B5-V3 and B14-V19 (see page 9).

Motors are designed to work horizontally, and when they work vertically –shaft up-, the DE bearing (the one in upper position) supports the shaft and rotor weight, which means a higher axial force than estimated.

For motors from frame size IEC-56 to 250 (included) the magnitude of this force is not important and it can be used a standard bearing.

For motors of frame size IEC-280, 315 and 355 an angular contact ball bearing (QJ /7000 type) must be installed at DE.

VERTICALLY MOUNTED MOTORS – SHAFT DOWN (*)

Mounting positions: B3-V5, B35-V15, B34-IM 2111, B5-V1 and B14-V18 (see page 9).

Motors are designed to work horizontally, and when they work vertically -shaft down-, the NDE bearing (the one in upper position) supports the shaft and rotor weight, which means a higher axial force than estimated.

For motors from frame size IEC-56 to 250 (included) the magnitude of this force is not important and it can be used a standard bearing.

For motors of frame size IEC-280, 315 and 355 an angular contact ball bearing (QJ/7000 type) must be installed at NDE.

(*) This information is not binding. Please contact to Cosgra to study your application.

PROTECTION SYSTEMS

On request, motors with following protection systems can be supplied:

- PTC thermistors in the winding (on request; from frame size 160 included).
- Temperature bimetallic thermistors (klixon), normally closed NC or normally open NO.
- PT100 thermistors in bearings and winding.
- Anti-condensation heaters in winding.

S9 DUTY FREQUENCY CONVERTER OPERATION MOTORS (**)

All **CEMER** motors can be powered by a frequency converter, but always bearing in mind the following technical requirements.

If the customer does not take precautions in the design of the electrical system, motors manufactured with standard insulation can fail and break down. Voltage peaks on the motor's terminals can have very great amplitude and last for a long time. Depending on the type, length and configuration of the motor's cabling, impulses can as much as double the voltage of the frequency changer link.

If the exchanger link voltage does not exceed 600 V, **CEMER** motors can operate with a frequency changer with output voltage up to 420 V without any kind of subsequent filter. It is recommended to order motors, if possible, with a star (Y) connection.

COSGRA recommends motors with an insulated protection system from frame size 280 (included) to avoid damages of residual currents.

Motors are just one complex part of an electrical drive system. Nowadays the frequency changer protects itself and the motor against thermal overload, but it will not detect the excess voltage peaks on the motor terminals. For the drive system, the problems can increase in the absence of frequency changer output filters and/or with excessively long cables. This often causes serious damage to the motor insulation.

There are various options for optimising the electrical drive system:

- Frequency changer output filter circuits (choke, du/dt, sine).
- Motor with reinforced insulation system.
- Combination of both the above.

The person responsible for the study must carefully select the different components of the system. That person is responsible for ensuring the voltage in the motor terminals does not exceed the permitted values. This also includes selecting the motor insulation system, always bearing in mind the effects of the other components of the whole.

To compensate for loss of performance of the motor due to the frequency converter, it is appropriate to use a service factor of 1.1 or above.

It is highly recommended to install temperature thermistors in the winding to prevent the motor overheating.

Sometimes forced ventilation is needed. See pages 45 and 46.

We have a technical department specialising in this kind of application who can advise you on selecting the motor correctly, depending on the application.

RATED SERVICE CONDITIONS

POWER

Rated output specified in this catalogue meet EN 60034-1, for which an ambient temperature of up to 40 °C and a height above sea level of ≤ 1,000 m are assumed. The admissible overloads are 10% for the maximum temperature of 40 °C or rated output up to 2,500 m above sea level.

In atmospheres with temperatures above the maximum, or at heights of more than 1,000 m above sea level, it is possible to operate with the motors provided if the rated output is reduced in accordance with the following tables:

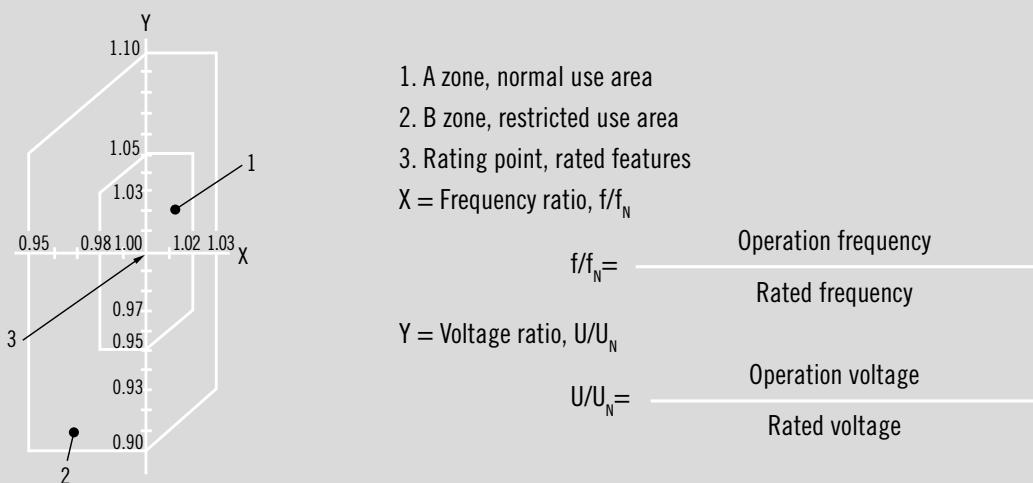

Ambient temperature °C	40	45	50	55	60
Power %	100	97	93	87	82
Altitude above sea level	1000	1500	2000	2500	3000
Power %	100	98	95	91	87
				3500	4000
				83	78

VOLTAGES AND FREQUENCIES

The motors are designed to be able to operate in the rated voltage and frequency conditions with the tolerances indicated in the diagram.

The motors can operate within the area of normal use, zone A, without reduction of the rated output and with voltage variations of ±5% of the design value and frequency variation of ± 2%.

In addition, the motors can also work in the area of restricted use, zone B, with voltage variations of ± 10 % and a frequency of ± 3%, always following the indications required in the EN 60034-1 standard.

Standard motors are delivered with following voltage and frequency values:

230/400 V	Δ/Y	50 Hz	275/480 V	Δ/Y	60 Hz
400/690 V	Δ/Y	50 Hz	480 V	Δ	60 Hz

On request, other voltages and frequencies can be supplied.

OVERLOAD CAPACITY

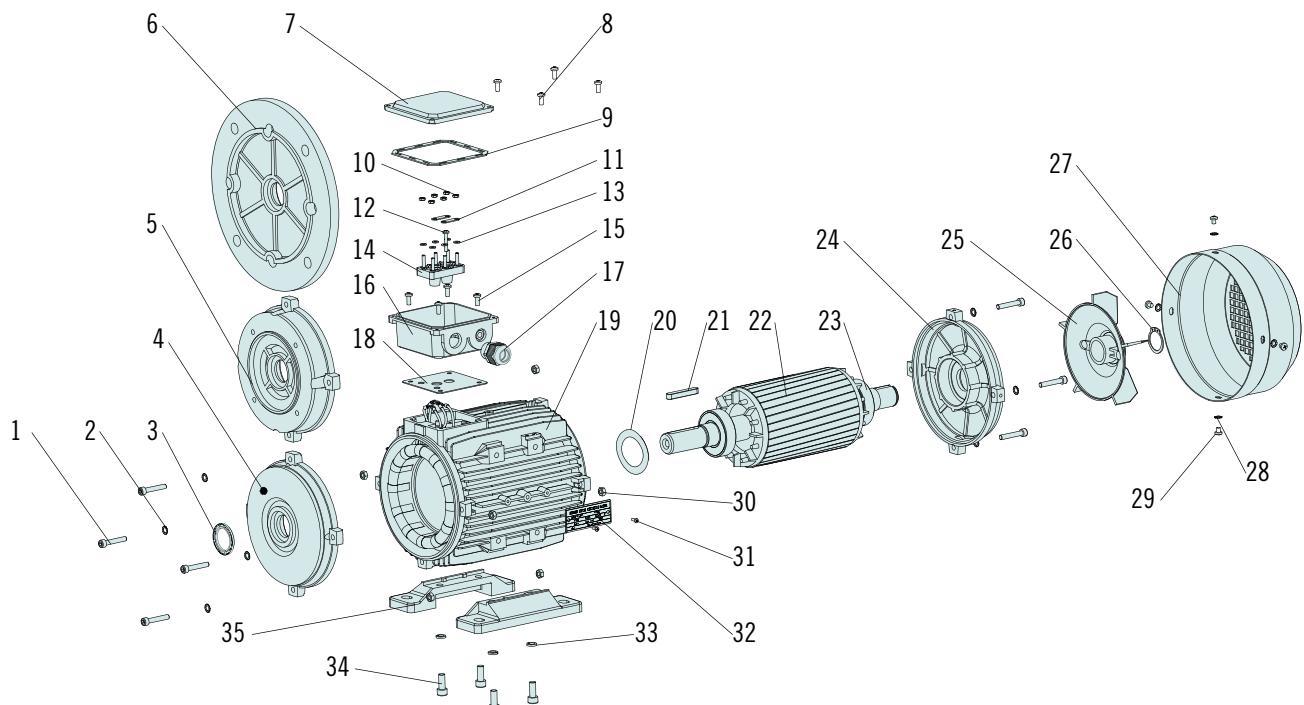

In accordance with EN 60034-1 standard, all motors can be submitted to the following overload conditions at rated frequency and voltage:

- 1.5 times the rated intensity for 2 minutes.
- 1.6 times the rated torque for 15 seconds (1.5 times $I_A/I_N < 4.5$).

BRAKE SYSTEM

Electromagnetic brake motors,
MSEFA / MSEFC series, frame size 63-160.

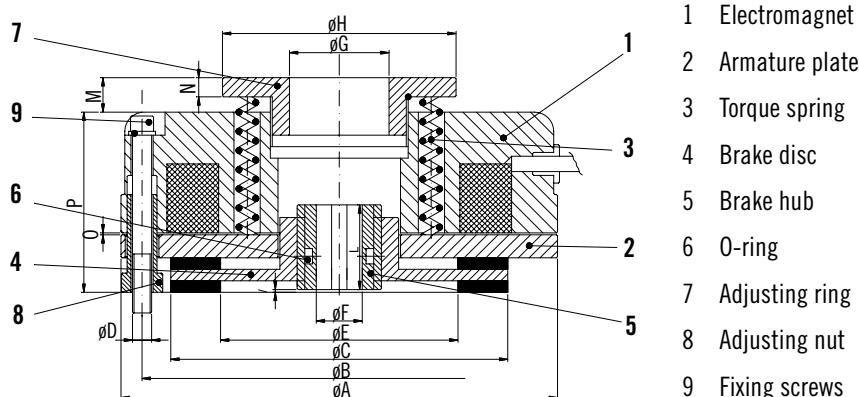

Brake system spare parts

MSEFA series
AC brake system
(Connection 230/400V 50Hz III)

- 1 Electromagnet
- 2 Armature plate
- 3 Adjusting screw
- 4 Torque spring
- 5 Brake hub
- 6 Brake disc
- 7 O-ring
- 8 Brake torque adjusting screw
- 9 Fixing screws

MSEFC series
DC brake system
(Single-phase connection 230V through rectifier 110V DC)

- 1 Electromagnet
- 2 Armature plate
- 3 Torque spring
- 4 Brake disc
- 5 Brake hub
- 6 O-ring
- 7 Adjusting ring
- 8 Adjusting nut
- 9 Fixing screws

ELECTRICAL DATA

EFFICIENCY
IE3 - 3000 rpm

ASYNCHRONOUS THREE-PHASE MOTORS

Squirrel-case rotor.

External cooling IC 411, continuous duty S1.
Insulation class 155 (F), protection degree IP55.

Aluminium motors **IE3-MS** series.
Cast iron motors **IE3-EG** series.

Synchronous speed 3000 rpm - 2 poles

* Electrical data change depending on the series. For further information, please contact to Cosgra. MYTE/MYE data.

(* **Single-phase motor with permanent capacitor – low starting torque.** It has two identical windings and the capacitor is connected in series to one of them, so that the motor can operate stably at full-load. Because of its low starting torque, this kind of motor is suitable for applications where torque at starting moment is low. CEMER MYT series have higher starting torque than other motors on the market.

Double capacitor (centrifugal switch) High starting torque

ASYNCHRONOUS SINGLE-PHASE MOTORS

Squirrel-case rotor.

* Electrical data change depending on the series. For further information, please contact to Cosgra. MLE data.

(*) Single-phase motor (centrifugal switch) – high starting torque. In addition to the run capacitor, connected in series, there is a second capacitor which increases the torque during the starting period and is disconnected from the start circuit when the rotation is stable (with the run capacitor). This kind of motor is suitable for applications where torque at starting moment is strong.

AC BRAKE
3000 rpm / 1500 rpm

Forced ventilation

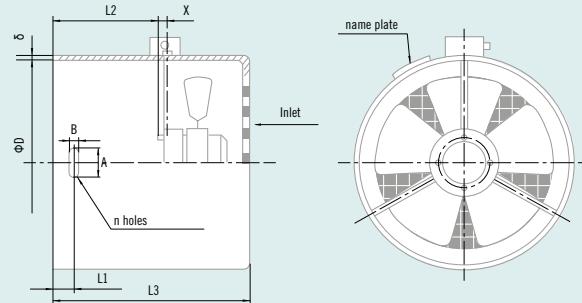

FORCED VENTILATION UNIT

G-D SERIES.

MOTOR FRAME SIZE IEC63-IEC132.

This kit ensures the cooling of motors driven by a frequency converter at low speeds and it reduces noise at high speeds. It's a compacted motor with an internal unit of aluminium and housing of steel sheet with priming paint.

The same unit allows a single-phase 230 V and a three-phase 230/400 V connection. This kit needs to be connected always separately from the motor connection. There is a specific forced ventilation kit for each frame size motor.

WARRANTIES, RETURNS AND COMPLAINTS

WARRANTIES

- **COSGRA** guarantees the motors it supplies against defective materials or manufacturing for a period of one year counted from the date of dispatch, taking the date given on the delivery note as valid, unless there is specific agreement in the offer or the acceptance of the order.
- Repairs are understood as taking place at **COSGRA'S** facilities, and the Purchaser will be responsible for paying the costs of dismantling, packaging, transport, Customs procedures, duties, etc. resulting from sending the equipment to **COSGRA'S** facilities and its subsequent delivery to the Purchaser.
- **COSGRA** may agree with the Purchaser to carry out repairs to defective parts or replacements at the Purchaser's facilities. **COSGRA** will not pay for repairs carried out by third parties.
- The warranty consists of the repair or replacement of the parts that are faulty due to defective material or manufacturing. If appropriate, the defective motor will be entirely replaced with a new one, and the transport and new dispatch costs paid.
- The repair or replacement of a defective part will not change the date of the beginning of the warranty period for the equipment supplied. However, the part replaced or repaired will have a year's warranty from its repair or replacement.
- Damage and the effects of normal wear and tear on the equipment are excluded from the warranty, as well as damage and defects caused by starting it up incorrectly, incorrect conservation or maintenance, erroneous storage or handling, modifications introduced without the written consent of **COSGRA**, and, in general, reasons not attributable to **COSGRA**.
- In all the circumstances set out in the above sections, **COSGRA** will not be responsible for defects in the motors and equipment supplied for more than one year from the date of dispatch.
- **COSGRA** will not under any circumstances be responsible for indirect and/or consequential damage that may occur as a result of the equipment supplied: loss of production, breakdowns or the cost of stoppages, etc.
- **COSGRA'S** full contractual responsibility deriving from the equipment supplied is limited to the value of the equipment supplied leading to the claim. This limitation will not apply to liability for direct injury to people or damage to property.
- The proper operation, conservation and maintenance of the equipment supplied is the exclusive responsibility and duty of care of the Purchaser or end user.

RETURNS AND COMPLAINTS

- **COSGRA** will not accept returns of equipment if they have not first been agreed with the Purchaser. A period of 15 days from receipt by the Purchaser of the goods supplied is established for it to notify **COSGRA** of its intention to return the equipment and the reason for this and to agree the procedure for returning it with **COSGRA**, as appropriate. Complaints from the Purchaser to **COSGRA** must always be made in writing and by reliable means.
- Transport costs must always be paid in cases of returns or dispatches of equipment to **COSGRA'S** facilities for refund, replacement or repair.
- **COSGRA** will not allow the return of equipment that has been used, fitted to other equipment or facilities, or dismantled without the involvement of **COSGRA**.
- **COSGRA** will not allow returns of products designed or manufactured specially for the order.

MECHANICAL SEALS FOR ROTARY SHAFTS

AC ELECTRIC MOTORS: Single-phase / Three-phase / Self-braking /
Anti-explosion / Flameproof / Variable speed

DRUM MOTORS AND MOTORIZED DRUMS

GEARBOXES: Worm gearbox / Pre-reduction / Double worm gearbox /
Planetary speed variators / Coaxials / Specific
